PROFESSIONAL SUMMARY

Results-driven Software Engineer with 3+ years of experience designing and developing scalable backend systems and cloud-based applications. Experienced in collaborating across cross-functional teams and delivering production-grade solutions in fast-paced environments. Recently completed a Master's in Software Engineering at Arizona State University, with expertise in distributed systems, cloud infrastructure, and AI-powered applications.

EDUCATION

Master of Software Engineering , Arizona State University	GPA: 3.90	2026
Bachelor of Computer Engineering , Pune University	GPA: 9.07	2021

SKILLS

Programming Languages	Java, Python, C/C++, JavaScript
Front-End	HTML/CSS, Bootstrap, React.js
Frameworks, Tools, Database	Django, Spring Boot, SQL, Node.js, REST APIs, Apache Kafka, MySQL, PostgreSQL, Salesforce, Heroku, AWS EC2, AWS Lambda, Git, LangChain, LangGraph, RAG
Systems & Concepts	Data Structures & Algorithms, Agile, Web Development, Operating Systems, SDLC, Backend Development, API Development, CI/CD
Soft Skills	Problem-Solving, Code Review & Bug Fixing, Adaptability & Quick Learning

EXPERIENCE

AI Engineer Intern Byteable AI Inc.	Jan 2026 - May 2026 Phoenix, AZ, USA
---	---

- Developed multi-agent AI workflows in VS Code and web IDE, reducing enterprise PoC generation time from 45 to 10 minutes.
- Built 6 MCP integrations for CI/CD, cloud, and GitHub into Byteable's platform, reducing manual DevOps setup by 60%.
- Engineered validation logic for AI-generated scaffolding, achieving a 92% pass rate across 40+ enterprise-grade test suites.

Research Assistant - Software Engineer Arizona State University	Aug 2025 - Dec 2025 Tempe, AZ, USA
---	---------------------------------------

- Automated Qualtrics survey dispatch via Spring Boot with CSV validation, cutting manual setup time by 90%.
- Created custom CSV validation and error handling to ensure 100% data accuracy in survey scheduling.
- Developed a Flutter cross-platform app with 10 gamified modules for dyslexic learners on Android and iOS.
- Implemented adaptive gameplay and progression tracking to personalize difficulty and enhance learning outcomes.

Senior Systems Engineer Infosys	Aug 2021 - Jul 2024 Pune, MH, India
---	--

- Delivered five high-quality software solutions for Mercedes-Benz in a fast-paced development environment, boosting system reliability by 30% and scalability through efficient coding and thorough testing.
- Integrated and significantly enhanced the performance and scalability of an existing CRM model by leveraging Heroku as middleware, reducing system response time from 7 seconds to just 1 second and improving data flow across teams.
- Developed a Salesforce cleanup process, boosting efficiency by 5% through automated removal of unused customer records.
- Designed an API in Salesforce to handle 10 different scenarios, improving data processing efficiency by 25%.
- Upgraded the technical architecture of the existing custom Ant used for Salesforce deployment from version 50 to version 57.
- Improved deployment efficiency and accuracy by upgrading and customizing Java-based tools, reducing deployment time by 30%, minimizing manual intervention, and ensuring seamless, reliable Salesforce operations across cross-functional teams.
- Optimized CRM systems to enhance user experience and responsiveness, leading to a 15% reduction in support tickets.

PROJECTS

Cloud-Native Face Recognition System

- Architected a serverless face-recognition pipeline on AWS Lambda with SQS and Docker, achieving 1s per-image latency.
- Deployed face-detection on AWS Greengrass via MQTT, offloading MTCNN inference to reduce cloud latency.
- Designed a distributed system splitting ML inference across cloud (Lambda) and edge (Greengrass), resolving Docker and timeout issues.

Fraud Detection System for Card Payments using Kafka

- Engineered real-time card payment fraud detection backend services using Java and Apache Kafka, flagging cross-location card usage within 5 minutes, processing up to 500 transactions/sec and generating automated alerts for suspicious transactions.
- Developed scalable Java Kafka producer-consumer modules and implemented robust anomaly detection logic, achieving 95% detection accuracy on test datasets while ensuring low-latency (less than 1 sec) transaction processing.

Scheme Management Portal for State Government

- Developed a Django web app during a hackathon for managing government schemes, benefiting over 1,000+ personnel.
- Built fund management features to minimize corruption risks by up to 40% and improve workflow efficiency.
